1. a. What is the measure of a central angle that represents a full rotation?
b. What fraction of a circle is represented by a Central Angle of $60^{\circ}$ ?
c. What fraction of a circle is represented by a Central Angle of $225^{\circ}$ ?
d. Describe how the central angle can be used to represent a fraction of a circle.
2. Return to Kianna's Ferris wheel. To set the mechanics of the wheel up correctly, Anna will need to know the distance that riders travel as they move around the Ferris wheel. Recall that the model Anna built had a radius of 1 meter. What is the total distance a rider would travel in one rotation? (i.e., the circumference of the circle).
3. Determine the distance a rider traveled along the circumference of the Ferris wheel for each angle below:
a. $\quad 90^{\circ}$
b. $\quad 30^{\circ}$
c. $270^{\circ}$
d. $240^{\circ}$
e. $335^{\circ}$
f. $-60^{\circ}$
4. An alternative measurement for the rotation in a circle is called a RADIAN. Go to What is a Radian? Leaving $r=1$, move the slider under change angle.
a. What does it appear one radian represents? How far around the circumference of the circle does one radian take you? If you are unsure go here.
b. How many radians is equivalent to one full rotation? If other words, $360^{\circ}=$ $\qquad$ radians.
c. Change $r=2$ and repeat parts (a) and (b).
d. Why does the radius not affect the radian measure of the angle?
5. Convert each degree measure of an angle into RADIANS. Keep your answer in terms of $\pi$ :
a. $\quad 90^{\circ}$
b. $\quad 30^{\circ}$
c. $\quad 270^{\circ}$
d. $\quad 240^{\circ}$
e. $\quad 335^{\circ}$
f. $-60^{\circ}$

- Write a note for yourself about how to convert degrees to radians.

6. Convert each radian measure of an angle into degrees.
a. $\quad \frac{\pi}{4}$
b. $\quad \pi$
C. $\quad \frac{5 \pi}{3}$
d. $\quad-\frac{\pi}{6}$
e. $\quad \frac{7 \pi}{4}$
f. $\quad 5 \pi$

- Write a note for yourself about how to convert radians to degrees.

7. Use the unit circle diagram and your knowledge of the trigonometric functions to complete the table below. Give your answers in exact form, as either rational numbers or radical expressions.

| $\theta$ | $\cos (\theta)$ | $\sin (\theta)$ |
| :---: | :---: | :---: |
| $\frac{\pi}{3}$ |  |  |
| $\frac{3 \pi}{4}$ |  |  |
| $\frac{5 \pi}{6}$ |  |  |
| 0 |  |  |
| $-\frac{3 \pi}{4}$ |  |  |
| $-\frac{7 \pi}{6}$ |  |  |
| $-\frac{11 \pi}{3}$ |  |  |

8. Use the unit circle diagram and your knowledge of the sine and cosine functions to complete the table below. Select values of $\theta$ so that $0 \leq \theta<2 \pi$.

| $\theta$ | $\cos (\theta)$ | $\sin (\theta)$ |
| :---: | :---: | :---: |
|  | $\frac{1}{2}$ |  |
|  |  | $-\frac{\sqrt{2}}{2}$ |
|  | $-\frac{\sqrt{2}}{2}$ | $\frac{\sqrt{2}}{2}$ |
|  | 0 | -1 |
|  |  | $-\frac{1}{2}$ |

9 How many radians does the minute hand of a clock rotate through over 10 minutes? How many degrees?
10. How many radians does the minute hand of a clock rotate through over half an hour? How many degrees?
