

1. Solve the equation below that you've been assigned by reversing operations. **Show your steps and check your solutions.** Be prepared to share your steps with your group.

K. $3|x - 5| + 11 = 20$

Q. $5(x + 1)^2 + 6 = 186$

J. $\frac{x-5}{3} - 4 = -11$

A. $\frac{5}{x} - \frac{3x}{x-1} = -3$

10. $\frac{1}{2}\sqrt[3]{x+1} - 5 = -3$

9. $4 - 5|x + 1| = -21$

8. $4(x - 2)^3 - 7 = 101$

7. $\frac{1}{x+2} - 3 = \frac{10}{x+2}$

6. $|x - 4| = 2x$

2. Exchange your card with someone at your table and complete the assigned problem by reversing operations.

Extra Practice: Complete problems in your math notebook.

3. Describe a general strategy for solving Quadratic Equations in Graphing form. Why do you typically get two solutions? Is it possible to solve an equation in the form $a(x - h)^2 + k = d$ and get 1 solution? What about no solutions? Explain fully.
4. A model rocket is launched from a platform in a field. The path of the rocket followed the equation $p(t) = -16(t - 2)^2 + 70$, where t represents time after igniting the rocket's engine and $p(t)$ represents the rocket's height in feet. Use the equation to:
- Determine the height of the platform.
 - Determine the maximum height the rocket reached.
 - A low cloud settled over the field at 50 feet obscuring the rocket during its flight. Write and solve an equation to determine the amount of time the rocket was hidden by the cloud.

5. Use a similar technique to solve the equations below. **Show your steps and check your solutions.**

a. $\sqrt{x-1} + 2 = 5$

b. $-12 + 4\sqrt{x+1} = -8$

c. $2\sqrt{3x-2} + 4 = 16$

d. $\sqrt{x+2} = x$

6. Describe a general strategy for solving Radical Equations like parts a-c above (in the form $a\sqrt{x-h} + k = d$). What is a typical number of solutions for these equations? Is it possible to get more solutions than typical? Fewer than typical solutions? Explain fully.

7. Solve the equations below: Check your solutions:

a. $5(x-1)^3 + 1 = -4$

b. $\frac{\sqrt[3]{x+4}}{2} - 1 = \frac{1}{2}$

c. $3\sqrt{x-4} + 2 = 5$

d. How is the strategy for these problems similar to your strategies described in #3 and #5?

8. Solve the equations below by reversing operations. Check your answers.

a. $|x-6| - 2 = 14$

b. $5|x+3| + 1 = 26$

c. $2 - 3|x+11| = -13$

d. $2|x+3| = 6x$
